

REMARKS

The 35 USC §112 Rejections

Claims 1, 12-14, 17-19 were rejected under 35 U.S.C. §112, first and second paragraphs, for lack of enablement and being indefinite because the specification does not disclose a repeatable process to obtain the monoclonal antibodies, hybridomas or phage display clones. Applicants submit that the claimed hybridomas have been deposited to obviate the rejection. Applicants hereby submit copies of deposit receipts. Applicants submit that the biological materials described in the specification as filed are the same as the deposited materials. Claims 12-14 and 19 have been canceled. Accordingly, Applicants respectfully request that the rejection of claims 1, 17-18 under 35 U.S.C. §112, first and second paragraphs, be withdrawn.

The 35 U.S.C. §103 Rejection

Claims 7-9 and 16 were rejected under 35 U.S.C. §103 as being unpatentable over U.S. patent No. 5,686,600 in view of U.S. patent No. 5,837,242 and U.S. patent No. 5,870,852. This rejection is respectfully traversed.

Applicants submit that claim 7 has been amended to obviate the rejection. Claim 7 is drawn to a pest eradication product comprising a first antibody or fragment thereof directed against the midgut of a pest, wherein said first antibody or fragment thereof is fused to a second antibody or fragment thereof directed against an antigenic epitope of a toxin. Claim 7 also recites the claimed first and second antibodies. Applicants submit that the cited patents do not teach or suggest a pest eradication product comprising the antibodies disclosed herein. Therefore, the invention as a whole is not *prima facie* obvious to one of ordinary skill in the art at the time the invention was made. Accordingly, Applicants respectfully submit that the rejection of claims 7-9 and 16 under 35 U.S.C. §103 be withdrawn.

This is intended to be a complete response to the Final Office Action mailed December 10, 2002. If any issues remain outstanding, the Examiner is respectfully requested to telephone the undersigned attorney of record for immediate resolution.

Respectfully submitted,

DATE:

April 29, 2003

The deposits were accompanied by: a scientific description a proposed taxonomic description indicated above. The deposits were received February 3, 2003 by this International Depository Authority and have been accepted.

AT YOUR REQUEST: X We will inform you of requests for the strains for 30 years.

The strains will be made available if a patent office signatory to the Budapest Treaty certifies one's right to receive, or if a U.S. Patent is issued citing the strains, and ATCC is instructed by the United States Patent & Trademark Office or the depositor to release said strains.

If the cultures should die or be destroyed during the effective term of the deposit, it shall be your responsibility to replace them with living cultures of the same.

The strains will be maintained for a period of at least 30 years from date of deposit, or five years after the most recent request for a sample, whichever is longer. The United States and many other countries are signatory to the Budapest Treaty.

The viability of the cultures cited above was tested February 27, 2003. On that date, the cultures were viable.
